

SupplyFlow Analytics Dashboard Preview

Power BI Dashboard Pages

Page	Audience	Primary Insight
Executive Overview	Strategic leaders	Revenue, gross profit, margin, on-time delivery, and risk trends
Carrier Performance	Operations managers	Carrier scorecard by shipment volume, late rate, damage rate, and cost
Delivery Risk	Logistics analysts	Regional risk heatmap and shipment exceptions

Core DAX Measures

Revenue, Gross Profit, Gross Margin %, On-Time Rate, Late Shipment Rate, Average Delivery Risk, and Cost Per Mile.

Semantic Model Relationships

fact_shipments connects to dim_carrier, dim_customer, dim_product, dim_location, dim_service_level, and dim_date. Product and region snowflake relationships connect dim_product to dim_product_category and dim_location to dim_region.

Drill-through Design

Users can drill from carrier, region, service level, product, and shipment identifiers into a shipment-level exception table sorted by delivery_risk_score.

Note

A native .pbix should be created in Power BI Desktop from the provided local CSV warehouse or from Redshift after cloud deployment.
