📍 Boston, MA 📞 857-506-3916 ✉ jennishamartin163@gmail.com 🔗 [linkedin.com/in/jennisha-martin](https://www.linkedin.com/in/jennisha-martin)

Education

Northeastern University Jan 2024 – May 2026
M.S. in Computer Science – **Khoury College of Computer Sciences** GPA: 3.82 / 4.0
Relevant Coursework: *Design Patterns, Algorithms, Machine Learning, Artificial Intelligence, Data Management and Processing, Web Development*

Anna University, Chennai, India Jun 2017 – Jun 2021
B.E. in Computer Science and Engineering GPA: 8.62 / 10.0

Skills

Languages: Python, Java, Javascript, DAX, SQL

Databases: MySQL, PostgreSQL, Snowflake, MongoDB

Web Technologies: HTML, CSS, ReactJS, NodeJS

Libraries & Frameworks: NumPy, Pandas, Seaborn, OpenCV, scikit-learn, TensorFlow, PyTorch

Business Intelligence & Analytics: Power BI, Tableau, Looker, SSIS, SSAS, Data Modeling, ETL, KPI Development

Experience

Ipsers Labs | Data Analyst Intern Sep 2025 – Dec 2025

- Conducted exploratory data analysis on **100K+** user travel records using **Python (pandas, NumPy)** and **SQL** to identify behavioural and spend trends and build traveler personas for an AI-based itinerary recommendation system.
- Developed BI dashboards to track budget estimates, user preference trends, trip spend metrics, and performance KPIs, reducing itinerary planning time by **30%** and enhancing the overall travel planning experience for users.

Infosys Limited | Senior Data Engineer Aug 2021 – Dec 2023

- Built scalable data workflows and interactive **BI** dashboards using Python, SQL, **Snowflake**, Tableau and PowerBI.
- Analyzed and transformed **500,000+** records from multiple data sources, identified performance bottlenecks, and optimized pipelines, reducing data load time by **15%** and significantly improving user experience.
- Developed **25+** Business Intelligence reports in **Tableau** and **Power BI** for sales, marketing, and finance stakeholders, turning complex data into clear and actionable insights, improving data accessibility and efficiency by **20%**.
- Managed the deployment and testing of **40+** Tableau dashboards on the Tableau Server, set up incremental and full refresh schedules, and consistently monitored data flows to ensure reliable, real-time access to critical KPIs for users.

Projects

ShareBuddy | AWS Lambda, OpenRouter, Bedrock, Node.js, Tailwind CSS, shadcn Jan 2026 – Present

- Developed ShareBuddy, a shared expense tracking platform that automates itemized bill splitting across group members through invoice parsing and preference-based cost allocation, using **Node js**, **Tailwind CSS**, **shadcn**, **OpenRouter**, and **Bedrock**.
- Designed an asynchronous serverless pipeline using **AWS S3**, **SQS**, **SNS**, S3 Event Triggers, and AWS Lambda to enable scalable, event-driven invoice processing with **MongoDB**-based status tracking.

StockPulse Analytics Platform | Python, Airflow, Snowflake, dbt, Tableau Jan 2025 – Mar 2025

- Built an end-to-end ELT pipeline using **Python** and **Airflow** to ingest daily stock data into **Snowflake**, transforming raw data through layered **dbt** models with automated quality checks and **GitHub Actions** CI/CD.
- Developed interactive Tableau dashboards to monitor portfolio P&L, cost basis, DCA performance, and moving average crossover trends, turning raw market data into actionable insights.

MediOps | GCP, Airflow, pySpark, BigQuery, Power BI Sep 2024 – Dec 2024

- Built a healthcare revenue analytics platform that automates claims and billing data processing using **Airflow**-orchestrated **Spark** pipelines and star schema modeling in **BigQuery**.
- Built interactive Power BI dashboards with custom **DAX** KPIs, enabling real-time tracking of claim denial rates, AR days, and provider performance with optimization via partitioning, clustering, and **CI/CD** automation.

HealthSync | Django, Python, SQL, Blockchain, Machine Learning Jan 2024 – Mar 2024

- Spearheaded the development of a secure healthcare management platform with role-based access for admins, doctors, and patients, integrating **blockchain** transaction logging and USDT wallet payments for data integrity.
- Implemented ML models (**Naive Bayes**, **KNN**, **Decision Tree**) for symptom-based disease prediction with end-to-end patient registration and treatment workflows using **Django** and **SQL**.
